

AERIAL WORK PLATFORM TRAINING PROGRAM OUTLINE

Total Equipment Training offers a comprehensive Aerial Work Platform (Lift) program which covers all pertinent OSHA standards. We tailor our program to meet your specific aerial lift needs and provide your employees with the knowledge to safely operate the equipment and the ability to recognize possible hazards as well as implement a program to minimize those hazards.

All operators will receive classroom training, hands on training by our qualified trainers, and will take both a written test and a practical evaluation to evidence their competency and provide you with the necessary documentation of training required by OSHA.

Total Equipment Training's Aerial Work Platform Training Program is approved by the US Department of Labor and OSHA recognized. It will include, but is not limited to:

Class Room Training

- Applications and types of equipment
- Inspection of the AWP
- Personnel safety – fall protection and PPE
- Federal and manufacturers rules
- Electrical hazards
- Principles of Operation
- Equipment considerations
- Load safety
- Preventive Maintenance

Hands On Training

- Personal protective equipment
- Load Handling
- Fueling and preventive maintenance
- Traveling when personnel are in basket
- Operational checks
- Pre-operation inspection
- Position of equipment (ground conditions)
- Control familiarization
- Driving equipment (both in basket and ground controls)
- Securing the machine
